The Dictus Band lifts the foot immediately after toe off. This reduces the risk of tripping over everyday obstacles such as doorsteps and carpets. The Dictus Band takes limited room in the shoe, is discreet and fits easily on any lace-up shoe.

» Addresses foot drop
» Safer walking
» Reduces risk of tripping
» Discreet
» Fits on normal shoe
» Suitable for children

aopmcorp.com
Features and Benefits:
- Discreet
- Fits easily on any lace-up shoe
- Flexible—uses recoil action with the rubber band and hook
- Design helps raise the foot after toe off, reducing the risk of tripping
- Easily cleaned with just a damp cloth
- Suitable for children

Specifications:
- Nylon D-Ring
- Elastic band
- Stainless-steel hooks
- Ankle strap consists of two layers of leather, closed and tightened with Velcro straps
- Available in 4 sizes (X-Large, Large, Medium and Child)
- Available in 2 colors (Black and Tan)
- Outdoor use: Use ankle strap
- The Barefoot version for indoor use is available as a separate component

Indications:
- Foot drop

Warranty:
- Against manufacturer defects

ABOUT US
AOPM is a wholesaler offering new and innovative products that will bring real and measurable value to our customers’ businesses in the orthotic, prosthetic and foot care markets. Our commitment is to remain focused on our customers’ needs and to provide them with product training and technical support that will allow them to achieve marketable success.

Precautions and Care
Check that the parts are fitted correctly. The elastic band has a seam, which should be placed in the middle of the knot at the D-ring. Any other positioning may lead to premature breakage of the band.
Do not expose the elastic band to direct sunlight, since this will shorten its life. The elastic band is also subject to wear and should be replaced when necessary, or at least once every three months. Always keep a spare elastic band. Spare elastic bands should be kept in a dark and cool place.
The ankle strap must be cleaned with a damp cloth only. No other cleaner is to be used. The user should always check that the D-ring, Velcro and fastening hooks are always in good condition. If the elastic band or any other part breaks or comes loose, the foot can no longer be in the upright position. Then there is the risk the user may fall.

INDOOR USE (BAREFOOT)

Fitting
The ankle strap is placed on top of the user’s sock (not directly on the skin). The opening and tightening function is managed with two Velcro straps. The elastic band is tied to the D-ring and to the hooks, which are attached to shoelace holes. The distance between the D-ring and the hooks determines the lifting ability of the elastic band. Please try out which shoelace holes are to be used for achieving the desired function.
